

STR Authentication Report For Cell Line

O) UBIGENE

1. Cell Name: L6565

2. Test Method: DNA was extracted using the genome extraction kit (Axygen), amplified

using a 20- STR amplification protocol, the STR loci and gender gene Amelogenin were

X-1	25.0			25.0	
TH01	0.				
D5S818			CEN	5	

Note: The cell lines were compared with the STR data of cell lines from ATCC, DSMZ, JCRB and RIKEN databases, the cell lines not included in the above cell banks could not be matched. D4S2408 and TH01 in the above sites is a human site, which is used to detect whether the cell is contaminated by human sources.

4. Conclusion: This cell line is identified as a mouse cell line. The STR results of L6565 cells are consistent with the genotypes of L6565 cell lines in EXPASY database, the cell ID corresponded to CVCL A9NB, and the STR results completely matched. In the test, No multi allele was found in this cell line, and there was no human source contamination in this cell line.
